

FTTH Fiber Termination with optical receiver

LR10, LR10W and LR10 0100

WISI LR10

The LR10 FTTH fiber termination provides an integrated optical receiver for CATV and SAT-TV frequencies.

It's enclosed in a wall-mount in-home housing, which incorporates both the splice and fiber tray and the o-e-converter for the RF signals.

The automatic level control and two RF output levels make the RF reception easiest possible.

LR10 W provides an integrated WDM filter for RF overlay on GPON infrastructure.

LR10 0100 offers a passive termination of a second fiber for future FTTH upgrade.
